The Achievement Cycle

© Fred Nickols 2018

To achieve a goal requires four things: First you must take aim, you must set your sights on some target. Second, you must act, you must do something, change something. Third, you must assess the effects of your actions. Fourth, if and as necessary, you must adjust your aim and your actions. Those four things constitute The Cycle of Achievement. Moreover, that cycle is iterative; rarely do you succeed via a single pass through the cycle. Sometimes, many iterations are required, with aims and actions being refined during each iteration.
